# SCOTT PROPAK

## PROFESSIONAL FIREFIGHTING SCBA

The Scott Propak is the latest lightweight self contained breathing apparatus from Scott Health & Safety. Offering the highest levels of protection, Propak builds upon the proven performance of the Scott Contour and represents the next generation in SCBA.

### Setting the standard

Approved to prEN137: 2002 class II, incorporating the stringent flame engulfment test, Propak is refined to a level of performance demanded by the professional fire fighter.

### Purposeful Design

Propak has many enhanced design features that build upon revered Scott performance characteristics.

#### Ⓞ Tempest demand valve

Proven design provides peace of mind and enables you to easily breathe to work – not work to breathe.

#### Ⓞ Trusted and proven high performance pneumatics

Supplies exceptionally high airflow, simple to maintain and fully user serviceable.

#### Ⓞ 100% Kevlar webbing

The highest possible specification providing the highest level of flame retardancy.

#### Ⓞ Easy adjust parachute style buckles

Quick pull forward action allows easy in transit adjustment. Doffing is simplified as the large buckles can be simply manipulated with gloved hands, a one finger release disengages the waist belt buckle.

#### Ⓞ New cylinder band design

Allows adjustment or change of cylinder in seconds.

#### Ⓞ Upgrade path

Following the Scott tradition, all elements of the set are designed to allow future upgrade with minimal cost.

Propak can be fitted with an optional Integrated Radio Information System (IRIS). Please see the separate IRIS brochure for further details.

### Proven Heritage . . . Focused Future

Scott Breathing Apparatus is renowned for its high performance and rugged dependability, cutting edge technology backed by dedicated customer support. For over 30 years its innovative engineering and constant product evolution has enabled the range to adapt, respond and predict the ever changing needs of professional fire services around the world – making Scott SCBA the fire fighters preferred choice.
